

OASIS+ SB Capabilities Statement

Our Mission

Ascella's mission is to deliver best-fit technology solutions and be a value-added, trusted partner to our government clients and their customers.

Ascella Business Position

Ascella founded in 2002, is a Minority-Owned Small Business that delivers value-added services and technology-based solutions that generate significant results for federal government agencies. Ascella combines innovative technology and domain expertise to help agencies deliver exceptional customer experience and services with consistency and accountability. Ascella helps federal agencies to be data-driven through technology-based solutions and domain expertise in business and financial operations. With Ascella, your success is our commitment.

Business Operations Optimization

We support federal agencies in optimizing core operations to drive mission success, from project and product management to Agile services. Our team assesses governance structures, operating models, and management practices, then designs and implements practical improvements that enhance accountability, efficiency, and decision-making across the agency.

Data and Analytics

We help agencies govern, measure, and improve organizational performance through innovative data solutions that improve decision-making and outcomes. We build intuitive dashboards, visualizations, and reports that let users drill down into data. By integrating data across business, financial, and operational domains, we enable agencies to move from static reporting to actionable insights that inform strategy, resource allocation, and risk management.

Agile Transformation

We provide advisory support to help federal organizations adopt and mature agile ways of working across programs and portfolios. Our teams assess current delivery models, recommend operating and governance changes, and support implementation of agile practices to improve transparency, collaboration, and outcomes. We help agencies align leadership, teams, and processes to enable iterative delivery while maintaining compliance with oversight and reporting requirements.

Data Strategy and Architecture Support

We deliver data strategy and architecture advisory support services that help agencies plan, govern, and implement effective data capabilities. We define data strategies, target architectures, and governance models, and advise on the adoption of new data platforms and analytics solutions. Our support focuses on alignment between mission needs, data assets, and technology investments to help agencies reduce risk and enable sustainable, data-driven decision-making.

Technology-Enabled Management Advisory

We provide management and development services that guide agencies in planning, overseeing, and executing technology modernization initiatives while sustaining mission-critical legacy applications. We support IT and business leaders with technology strategy, roadmap development, and governance for system modernization and cloud environments. Applying agile and iterative approaches, we help agencies improve visibility, manage risk, and ensure technology efforts are aligned with operational priorities.
